

Art Unit: 2143

CLM PTO 12/21/01

C. Styles

1. A method for providing services for clients associated with a data communication network, said services being provided by at least one external service provider, the method comprising:

- signalling from said at least one external service provider offers that associate with services to an interface entity associated with the data network;

- processing the offers at the interface entity in order to make a decision regarding the acceptance of the offers;

- including accepted services into a register of services that are available for the clients;

- requesting for a service from the interface entity for use by one of said clients;

- processing the request by the interface entity to find a matching service from the registered services; and

- if a matching service is found, requesting for said service from an external service provider providing said service by communicating a message to said external service provider based on a protocol that enables initiation of a service provisioning session.

2. A method as claimed in claim 1, wherein said protocol comprises a session initiation protocol (SIP).

3. A method as claimed in claim 1, wherein said protocol comprises Hypertext Transfer Protocol (HTTP).

4. A method as claimed in claim 1, wherein said protocol comprises Simple Object Activation Protocol (SOAP).

5. (Amended) A method as claimed in claim 1, wherein the at least one external service provider offers the services based on said protocol.

Art Unit: 2143

5. A method as claimed in claim 1, wherein the offers are broadcast to be received by interface entities of at least two data networks.

7. A method as claimed in claim 1, wherein an authentication procedure is accomplished between the interface entity of the data network and the external service provider.

8. A method as claimed in claim 1, comprising establishing interfaces for the provision of the requested service based on information communicated by means of said protocol.

9. A method as claimed in claim 8, wherein said information communicated by means of the protocol the establishment of interfaces between the interface entity and the external service provider without any beforehand defined interfaces for the service provisioning.

10. A method as claimed in claim 1, wherein all interfaces required for providing the service connection are established based on information communicated by means of said protocol.

11. A method as claimed in claim 1, comprising a step of modifying the requested service to be suitable for use in the data network based on information communicated by means of said protocol.

Art Unit: 2143

12. A method as claimed in claim 1, wherein at least one of the clients comprises an application that is internal for the data network.

13. A method as claimed in claim 1, wherein at least one of the services comprises a call management service.

14. A method as claimed in claim 1, wherein at least one of the clients comprises an end user of the data network.

15. A method as claimed in claim 1, wherein the services are provided based in a model that is modified from a model defined by the Farley Group.

16. (Amended) A method as claimed in claim 1, wherein a service discovery interface of the interface entity monitors for offers by the at least one external service provider.

17. A method as claimed in claim 16, wherein the service discovery interface discovers only selected offers.

18. A method as claimed in claim 1, wherein the interface entity sends an inquiry for a service to at least one external service provider.

19. A method as claimed in claim 18, wherein the inquiry is broadcast to possible service providers.

20. (Amended) A method as claimed in claim 1, wherein the offers by the at least one external service provider are registered in a register function.
